

ABSTRACT OF THE DISCLOSURE

A doll assembly includes a base that has a top side. A set of legs is
5 integrally attached to and extends upwardly from the top side. The set of
legs has an upper end that is attached together. A torso section has bottom
end and a top end. Each of a pair of arms is integrally attached to and
extends away from the torso section. A neck is integrally attached to and
extends upwardly from the top end. A first spring attaches the torso
10 section to the set of legs such that the torso section is movable with
respect to the set of legs. A head has a bottom side. A second spring
attaches the neck to the head such that the head is movable with respect to
the neck.
